

RAILWAY TRANSFORMERS **REPAIRS**

SWISS QUALITY BÄCHLI AG

As well as developing and manufacturing new transformers, Bächli can carry out extensive repairs and supply optimised reproductions for defective railway transformers. Efficient processes enable Bächli to react to customer requests quickly and flexibly, minimising rolling stock downtime.

By analysing the transformer, the source of the defect can be comprehensively determined. The customer receives expert advice from Bächli and can choose from two options: Repairing the existing transformer, or receiving an optimised reproduction. Bächli utilises the latest developments and technologies in reproducing the transformer, making the most effective use possible of the materials.

For both repairs and optimised reproductions, Bächli observes the relevant regulations to ensure that the product meets specified standards. It goes without saying that the requisite documents and certificates are also supplied.

COMPREHENSIVE INDUSTRY EXPERTISE

Reliability

With impressive short lead times and order processing speeds, Bächli is a reliable partner.

Expertise

Thanks to Bächli's longstanding experience and expertise, orders can even be processed when only a few technical details are available.

Personal contact

Bächli's lean structure means that every customer is provided with their own personal expert contact.

One-off items

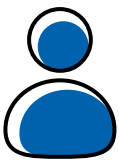

Even when repairing one-off items, Bächli offers a first-class service.

Documentation

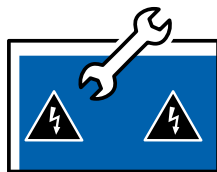

Bächli reviews current requirements and carries out the necessary inspections. The customer is supplied with complete documentation, so that they can trace and identify the defect and record it in their system.

OUR SERVICE

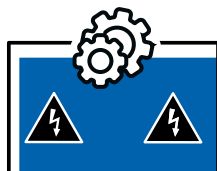

Bächli as your contact

Bächli AG is your ideal partner in the event of a defect. Efficient processes enable Bächli to react to customer requests quickly and flexibly. Bächli's lean structure means that every customer is provided with their own personal expert contact.

Basic offer

Bächli will repair or build an exact reproduction of the defective transformer, ensuring that existing performance needs continue to be met.

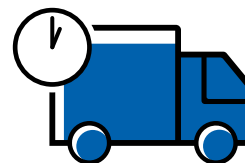

Optimised offer

Bächli optimises the defective transformer using a recalculation that makes the best possible use of the materials. This not only enhances its performance, but also prevents problems from occurring in the future.

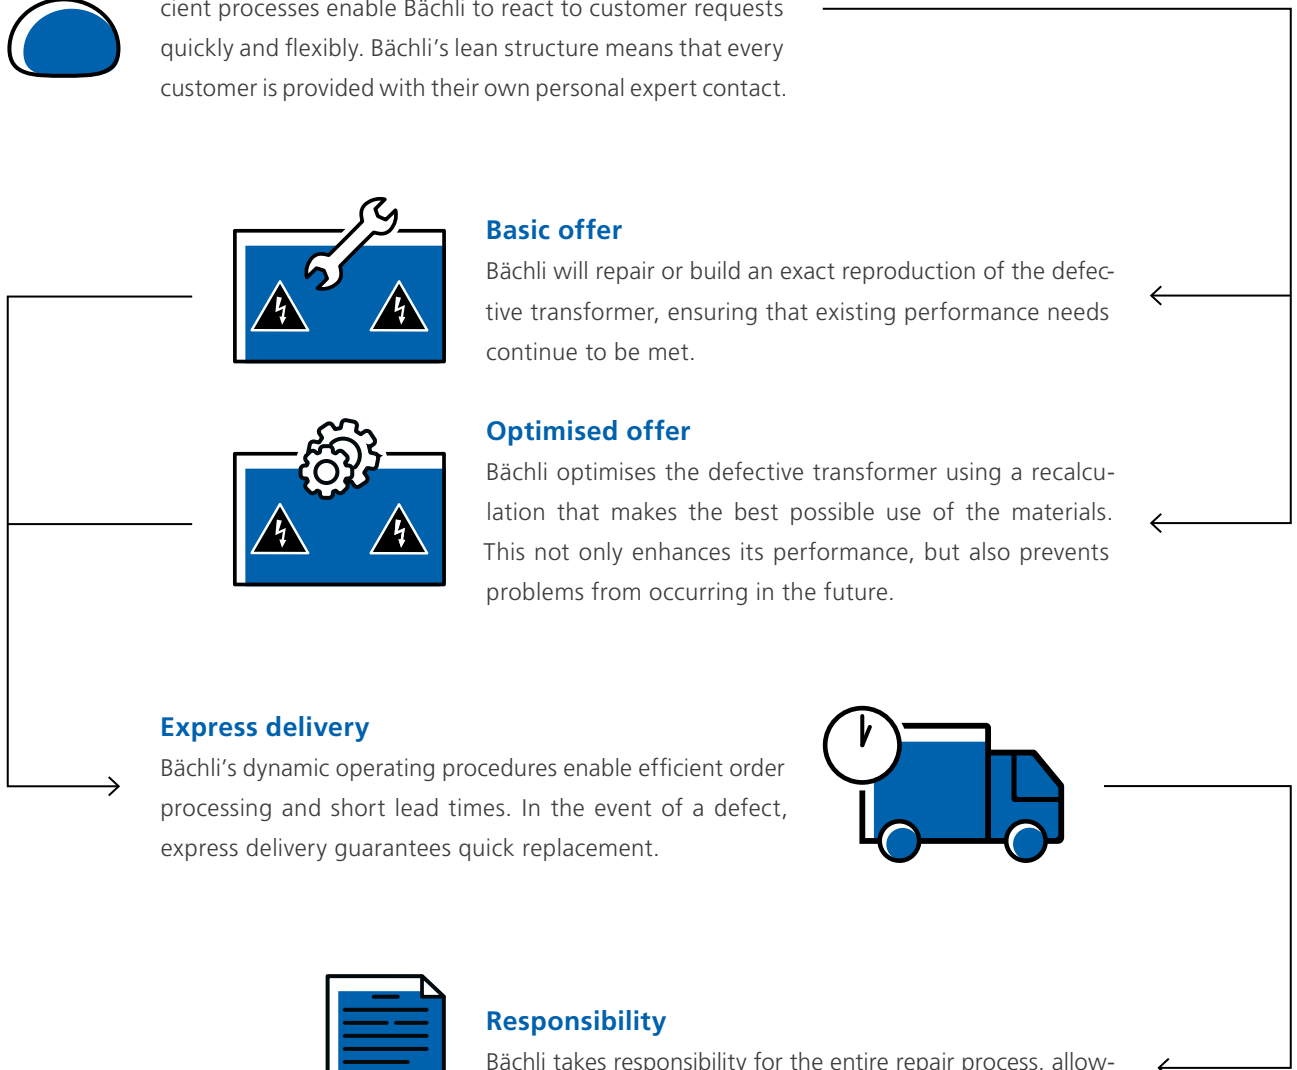

Express delivery

Bächli's dynamic operating procedures enable efficient order processing and short lead times. In the event of a defect, express delivery guarantees quick replacement.

Responsibility

Bächli takes responsibility for the entire repair process, allowing customers to focus on their core activities.
